DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Although the prior art teaches a Computed Tomography (CT) apparatus and computer program for controlling a CT apparatus, requiring various imaging analysis and processing elements and software. However, prior art fails to teach or fairly suggest a Computed Tomography (CT) apparatus and computer program for controlling a CT apparatus wherein a simulation image is generated from data corresponding to a value associated with an index of picture quality in the manner required by independent Claims 1, 9, and 14-17.

Claims 2-8 and 10-13 are allowed based on their dependency upon Claims 1 and 9, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. patent to Utsuda et al. (USP# 4,769,696) teaches a simulation unit that generates an image, but does not do so based on data calculated from a value associated with an index of picture quality.

U.S. Patent to Darel et al (USP# 6,024,018) teaches generating a reference image and adjusting system parameters based on color information from said reference image, but does not generate a simulation image based on data associated with an index of picture quality.

U.S. Patent to Inagaki (USP# 6,807,288) teaches generating a pseudo image from the detection conditions of a real "picked-up" image, but does not teach generating said pseudo image based on data associated with an index of picture quality.

U.S. patent to Inagaki (USP# 6,885,777) teaches generating a pseudo image from the detection conditions of a real "picked-up" image, but does not teach generating said pseudo image based on data associated with an index of picture quality.

U.S. Patent Application Publication to Brinker et al. (PGPUB# 2002/0110268) teaches generating an image from markings within an imaging volume, which have known spatial positions relative to one another, for the purpose of adjusting system parameters, but do not teach generating a simulation image based on data associated with an index of picture quality.
